Subject Index—Volume 3

A

Abdomen, effect of aortography of, on proximal renal tubule function, 130

Abscesses, external localization of experimental sterile, 397

Absorptiometry, direct photon, precision and accuracy of bone mineral determination by, 141

Acetylcholine, effect of, on renal arteriography; preliminary observations, 81

Acid-barium swallows in the radiographic evaluation of clinical esophagitis, 67

Age changes in five parameters of metacarpal growth, 27

Air embolus, cavitation at catheter tips possible cause of, 159

Anatomy
- fetal, displayed by ultrasound, 442
- intracranial, visualized in vivo by ultrasound, 243

Anesthesia, thiopental, and tannic acid diagnostic enemas, 134

Angiocardiography
- delivery pressure at catheter tip in selective, 133
- umbilical vessel cardiac catheterization and, 329
- vascular jet collapse in selective, 388

Angio-Conray, nephrotoxicity of, in experimental angiography, 297

Angiogram, blood flow pattern in transaxillary cervicocerebral serial, 451

Angiography
- of autologous cerebral emboli in the dog, 330
- cerebral, relationship between circulation time and regional blood flow, 86
- experimental in vivo photographic magnification, of canine kidney and bowel, 120
- of muscular patterns in lower extremities before and after exercise; technique for study of blood flow and diagnostic applications, 136
- of myocardial bridging of coronary artery, 213
- nephrotoxicity of iodothalamate contrast materials (Conray, Angio-Conray) in experimental, 297
- renal, experimental examination of post, toxicity with diatrizoate contrast materials, 137
- renal hemodynamics during selective renal, 389
- of pulmonary circulation during functional elimination of one lung, 280
- study of cerebral vasospasm induced by subarachnoid blood and serotonin, 402
- visualization of the secretin-stimulated pancreas by, 69

Aorta
- echocardiography of root of, 356
- human abdominal, microangiological study of, 70

Aortography
- abdominal, influence of, on arterial blood pressure, cardiac output and heart rate, 6
- effect of abdominal, on proximal renal tubule function, 130
- effect of, on renal hemodynamics in normal man, 92
- spinal cord damage from contrast media in experimental, 220

Arterial collateral circulation of the liver, 68

Arteriography
- in dogs, technique for experimental embolization of cerebral arteries and repetitive selective internal carotid, 275
- renal, effect of acetylcholine on; preliminary observations, 81
- renal, in generalized Schwartzman reaction, 23

Arteries, cerebral, and repetitive selective internal carotid arteriography in dogs, technique for experimental embolization of, 275

Artery
- collateral development of, and renal function in experimental renal hypertension; preliminary observations, 108
- coronary, angiographic appearance of myocardial bridging of, 213
- internal carotid, relation of degree of stenosis of, to blood flow and pressure gradient; angiographic and surgical study in man, 337
- vertebral reflux; laboratory investigation of nonobstructive causes of retrograde flow of contrast material in contralateral vertebral artery, 139

Ascites, experimental hepatic lymphography in, 225

B

Bat wing, effects on microcirculation in
- application of contrast media to external surface of vasculature, 151
- application of monomers and polymers to external surface of vasculature, 408

Blood, subarachnoid, and serotonin, cerebral vasospasm induced by, 402

Blood flow
- pattern in transaxillary cervicocerebral serial angiogram, 451
- and pressure gradient, relation of degree of internal carotid artery stenosis to, 337
- relationship between cerebral angiographic circulation time and regional cerebral, 86
- technique for study of, during muscular angiography of lower extremities before and after exercise, 136
- tumor area and, surface-limited nutrient supply, 216

Bone
- density of the ulna; comparisons of different radiologic methods for in situ estimation, 103
- mineral determination by direct photon absorptiometry, precision and accuracy of, 141

Subject Index—Volume 3

A

Abdomen, effect of aortography of, on proximal renal tubule function, 130

Abscesses, external localization of experimental sterile, 397

Absorptiometry, direct photon, precision and accuracy of bone mineral determination by, 141

Acetylcholine, effect of, on renal arteriography; preliminary observations, 81

Acid-barium swallows in the radiographic evaluation of clinical esophagitis, 67

Age changes in five parameters of metacarpal growth, 27

Air embolus, cavitation at catheter tips possible cause of, 159

Anatomy
- fetal, displayed by ultrasound, 442
- intracranial, visualized in vivo by ultrasound, 243

Anesthesia, thiopental, and tannic acid diagnostic enemas, 134

Angiocardiography
- delivery pressure at catheter tip in selective, 133
- umbilical vessel cardiac catheterization and, 329
- vascular jet collapse in selective, 388

Angio-Conray, nephrotoxicity of, in experimental angiography, 297

Angiogram, blood flow pattern in transaxillary cervicocerebral serial, 451

Angiography
- of autologous cerebral emboli in the dog, 330
- cerebral, relationship between circulation time and regional blood flow, 86
- experimental in vivo photographic magnification, of canine kidney and bowel, 120
- of muscular patterns in lower extremities before and after exercise; technique for study of blood flow and diagnostic applications, 136
- of myocardial bridging of coronary artery, 213
- nephrotoxicity of iodothalamate contrast materials (Conray, Angio-Conray) in experimental, 297
- renal, experimental examination of post, toxicity with diatrizoate contrast materials, 137
- renal hemodynamics during selective renal, 389
- of pulmonary circulation during functional elimination of one lung, 280
- study of cerebral vasospasm induced by subarachnoid blood and serotonin, 402
- visualization of the secretin-stimulated pancreas by, 69

Aorta
- echocardiography of root of, 356
- human abdominal, microangiological study of, 70

Aortography
- abdominal, influence of, on arterial blood pressure, cardiac output and heart rate, 6
- effect of abdominal, on proximal renal tubule function, 130
- effect of, on renal hemodynamics in normal man, 92
- spinal cord damage from contrast media in experimental, 220

Arterial collateral circulation of the liver, 68

Arteriography
- in dogs, technique for experimental embolization of cerebral arteries and repetitive selective internal carotid, 275
- renal, effect of acetylcholine on; preliminary observations, 81
- renal, in generalized Schwartzman reaction, 23

Arteries, cerebral, and repetitive selective internal carotid arteriography in dogs, technique for experimental embolization of, 275

Artery
- collateral development of, and renal function in experimental renal hypertension; preliminary observations, 108
- coronary, angiographic appearance of myocardial bridging of, 213
- internal carotid, relation of degree of stenosis of, to blood flow and pressure gradient; angiographic and surgical study in man, 337
- vertebral reflux; laboratory investigation of nonobstructive causes of retrograde flow of contrast material in contralateral vertebral artery, 139

Ascites, experimental hepatic lymphography in, 225

B

Bat wing, effects on microcirculation in
- application of contrast media to external surface of vasculature, 151
- application of monomers and polymers to external surface of vasculature, 408

Blood, subarachnoid, and serotonin, cerebral vasospasm induced by, 402

Blood flow
- pattern in transaxillary cervicocerebral serial angiogram, 451
- and pressure gradient, relation of degree of internal carotid artery stenosis to, 337
- relationship between cerebral angiographic circulation time and regional cerebral, 86
- technique for study of, during muscular angiography of lower extremities before and after exercise, 136
- tumor area and, surface-limited nutrient supply, 216

Bone
- density of the ulna; comparisons of different radiologic methods for in situ estimation, 103
- mineral determination by direct photon absorptiometry, precision and accuracy of, 141

Bowel, canine, experimental in vivo photographic magnification angiography of, 120
Bronchography in canine and human lungs, powdered tantalum as a medium for, 229

C

Catheterization, umbilical vessel cardiac, and angiocardiography, 329
Cavitation at catheter tips; possible cause of air embolus, 159
Cerebral ventricular system, ultrasonic determination of size of, 223
Cerebrum
  angiography of, relationship between circulation time and regional blood flow, 86
  experimental emboli of; angiographic evaluation of autologous emboli in the dog, 330
  vasospasm of, induced by subarachnoid blood and serotonin, 402
Cholangiography, experimental reflux pancreatography and, 131
Cholelithogenesis from cholestanol, in the rabbit, effect of vagotomy on, 239
Cholestanol cholelithogenesis in the rabbit, effect of vagotomy on, 239
Cinefluorography of pharyngeal swallowing in neuromuscular disorders, 219
Cineradiography, high speed (540 frames per second) biplane, 51
Circulation, arterial collateral, of the liver, 68
Closed chest operative method to produce experimental mitral insufficiency, 292
Conray, nephrotoxicity of in experimental angiography, 297
Contrast agents, methylglucamine, toxicity studies with, 324
Contrast densities, improvement in the perception of weak, in roentgen television fluoroscopy, 72
Contrast material(s)
  in contralateral vertebral artery, laboratory investigation of nonobstructive causes of retrograde flow of, 139
  experimental examination of postangiographic damage of kidneys by diatrizoate, 296
  (Conray, Angio-Conray) in experimental angiography, nephrotoxicity of, 297
  experimental examination of post angiographic renal toxicity with diatrizoate, 137
  lysozymuric response to, in the dog, 65
  particulate radiographic, in quantitative evaluation of experimental mitral insufficiency, 15
Contrast media
  in experimental aortography, spinal cord damage from, 220
  to external surface of vasculature, application of; effects on microcirculation in bat wing, 151
  hemodynamic effects of two; hypertonic sodium chloride and hypertonic dextrose; intracarotid injection study in the dog, 318
  on renal extraction of PAH, effect of, 301
  renal hemodynamic effects of, 310
Contrast medium
  for bronchography in canine and human lungs, powdered tantalum as a, 229
  Isopaque 440 (sodium and N-methylglucamine metrizoate), clinical and hemodynamic evaluation of, 298

D

Data processing, theoretical considerations in optimum; imaging distribution of radioactivity within human body, 199
Defecation, pressure variations in the rectum and ileum during experimentally induced urgency of, 72
Density, bone, of the ulna; comparisons of different radiologic methods for in situ estimation, 103
Densities, contrast, improvement in the perception of weak, in roentgen television fluoroscopy, 72
Dextrose, hypertonic; hemodynamic effects of, 318
Diatrizoate
  contrast material, experimental examination of postangiographic damage of kidneys by, 296
  contrast materials, experimental examination of post angiographic renal toxicity with, 137
Disease of lower extremity, location of occlusive arterial, 188
Dopamine, effect of, on renal vasculature of dogs with experimental renovascular hypertension, 1

E

Echocardiography of aortic root, 356
Echoencephalography, pulsatile; review and importance of respiratory factor, 375
EDTA, effect of, in the rat, 372
Emboli, experimental cerebral; angiographic evaluation of autologous emboli in the dog, 330
Embolus, air, cavitation at catheter tips possible cause of, 159
Encephalography of third ventricle, 224
Enemas, tannic acid diagnostic, thiopental anesthesia and, 134
Epiphyses, cone-shaped, in the hand, 433
Esophagitis, clinical, acid-barium swallows in the radiographic evaluation of, 67
Extremities, muscular angiographic patterns in lower, before and after exercise; technique for study of blood flow and diagnostic applications, 136
Extremity, lower, location of occlusive arterial disease of, 188

F

Fetus, anatomy of, displayed by ultrasound, 442
Fish vertebra sign, re-evaluation of, in sickle cell hemoglobinopathy, 128
Flow
  blood, relationship between cerebral angiographic circulation time and regional cerebral, 86
  blood, technique for study of, during muscular angiography of lower extremities before and after exercise, 136
  characteristics of injection catheters, computer analysis of, 427
  pattern of blood in transaxillary cervicocerebral serial angiogram, 451
  retrograde, of contrast material in contralateral vertebral artery, laboratory investigation of nonobstructive causes of, 139
  velocity variations in pulmonary veins of the dog, 73
Fluoroscopy, improvement in the perception of weak contrast densities in roentgen television, 72

G

Glands, submandibular salivary, roentgenologic method in diagnosis of diseases of, 129

H

Hand, cone-shaped epiphyses in the, 433
Heart
  pacemaker, 285
  rate, influence of abdominal aortography on arterial blood pressure, cardiac output and, 6
Hemodynamics, renal, effect of aortography on, in normal man, 92
Hemoglobinopathy, sickle cell, re-evaluation of the "fish vertebra" sign in, 128
Hepatography, experimental oral, in rats, 35
Hodgkin's disease; comparison of findings of clinical and lymphographical examinations, 450
Hypertension
  effect of dopamine on renal vasculature of dogs with experimental, 1
  renal, collateral arterial development and renal function in experimental, 108
  renovascular, evaluation of urea washout pyelogram and urography in assessment of, 137
Hypotension, hemorrhagic, renal vascular alterations induced by, 345

I

Ileum, pressure variations in, during experimentally induced urgency of defecation, 72
Image processing system, television, evaluation of, 44
Imaging distribution of radioactivity within human body; theoretical considerations in optimum data processing, 199
Iodipamide, renal excretion of, in dog and rabbit, 414
Isopaque 440 (sodium and N-methylglucamine metrizoate), clinical and hemodynamic evaluation of, 298

J

Jet, vascular, collapse in selective angiocardiography, 388

K

Kidney, canine, experimental in vivo photographic magnification angiography of, 120
Kidneys by diatrizoate contrast material, experimental examination of postangiographic damage of, 296

L

Liver, arterial collateral circulation of, 68
Location of occlusive arterial disease of lower extremity; possible importance of local factors in pathogenesis, 188
Lung
  angiographic examination of pulmonary circulation during functional elimination of one, 280
  weight, relationship of, to body length and weight, 61
Lungs, powdered tantalum as medium for bronchography in canine and human, 229
Lymphatic system, parasternal, scintigraphy of, 336
Lymph nodes
  in animals, experimental opacification of substernal, 165
  lymphographic and histologic picture of normal and pathologically altered, 222
Lymphography
  in ascites, experimental hepatic, 225
  in melanoma, 387
  physiological and simple approach to, 71
Lysozymuric response to contrast material in the dog, 65

M

Maturation, relation of metacarpal notching to stature and, of normal children, 96
Melanoma, lymphography in, 387
Metacarpal
  growth, age changes in five parameters of, 27
  notching, relation of, to stature and maturational status of normal children, 96
Methylglucamine contrast agents, toxicity studies with, 324
Microangiology, study of plaque localization and distribution of vasa vasorum by, 70

Microcirculation in bat wing, effects on
application of contrast media to external surface of vasculature, 151
by application of monomers and polymers to external surface of vasculature, 408
Mitral insufficiency
experimental; radiologic closed chest operative method, 292
particulate radiographic contrast material in quantitative evaluation of experimental, 15
Monomers and polymers to external surface of vasculature, application of; effects on microcirculation in bat wing, 408
Muscles, angiographic patterns of, in lower extremities before and after exercise; technique for study of blood flow and diagnostic applications, 136
Myocardial bridging of coronary artery, angiographic appearance of, 213

N

Nephrotoxicity of iodothalamate contrast materials (Conray, Angio-Conray) in experimental angiography, 297
Neuromuscular disorders, cinefluorographic analysis of pharyngeal swallowing in, 219
Notching, relation of metacarpal, to stature and maturational status of normal children, 96
Nutrient supply, surface-limited; tumor area and blood flow, 216

O

Opacification of substernal lymph nodes in animals, experimental, 165

P

Pacemaker electrodes, percutaneous insertion of extracardiac, 285
PAH, effect of contrast media on renal extraction of, 301
Pancreas, secretin-stimulated, angiographic visualization of, 69
Pancreatography, experimental reflux, and cholangiography, 131
Parameter in following thyroid functions; per cent uptake per gram, 382
Parathyroid selenomethionine accretion, attempts to enhance; effect of EDTA in the rat, 372
Per cent uptake per gram; parameter in following thyroid functions, 382
Physiology of human renal pelvis and ureter, 384
Placenta, scintigraphic localization of, with technetium ^{99m}Tc-labeled albumin, 226
Plaque localization and distribution of vasa vasorum: a microangiological study of the human abdominal aorta, 70
Polymers to external surface of vasculature, application of monomers and; effects on microcirculation in bat wing, 408
Portography, translumbar, 376
Pressure
arterial blood, influence of abdominal aortography on, cardiac output and heart rate, 6
delivery, at catheter tip in selective angiocardiography, 133
variations in the rectum and ileum during experimentally induced urgency of defecation, 72
Pulmonary circulation
controlled, hemodynamic influence of sodium iothalamate on, 267
during functional elimination of one lung, angiographic examination of, 280
Pulmonary valvular stenosis, determination of orifice size in isolated, 367
Pyelogram, urea washout, evaluation of, and urography in assessment of renovascular hypertension, 137

R

Radioactivity within human body, imaging distribution of, 199
Radiography
in evaluation of clinical esophagitis by acid-barium swallows, 67
full-color and three-dimensional effect in displays of, 56
Radiology, comparison of different methods of, for in situ estimation of bone density of the ulna, 103
Rectum, pressure variations in, during experimentally induced urgency of defecation, 72
Reflex, vesicorenal, 384
Reflux through normal aortic valves, 178
Renal
arterial diseases, pathologic-arteriographic correlation of, 221
excretion of iodipamide in dog and rabbit, 414
extraction of PAH, effect of contrast media on, 301
hemodynamic effects of contrast media, 310
hemodynamics during selective renal angiography, 389
pelvis and ureter, observations on physiology of human, 384
vascular alterations induced by hemorrhagic hypotension, 345
Roentgenology, method in diagnosis of diseases of the submandibular salivary glands, 129
Roentgen television fluoroscopy, improvement in the perception of weak contrast densities in, 72

S

Salivary glands, submandibular, roentgenologic method in diagnosis of diseases of, 129
Scintigraphy
of parasternal lymphatic system, 336
of placenta with technetium ^{99m}Tc-labeled albumin, 226

Secretin, angiographic visualization of the pancreas stimulated by, 69
Selenomethionine accretion, attempts to enhance by parathyroid, 372
Serotonin, cerebral vasospasm induced by subarachnoid blood and, 402
Schwartzman reaction, renal arteriography in generalized, 23
Sickle cell hemoglobinopathy, re-evaluation of the "fish vertebra" sign in, 128
Sodium and N-methylglucamine metrizoate (Isopaque 440), clinical and hemodynamic evaluation of, 289
Sodium chloride, hypertonic, hemodynamic effects of, 318
Sodium diatrizoate by absorption spectrophotometry, estimation of, 271
Sodium iothalamate on controlled pulmonary circulation, hemodynamic influence of, 267
Sodium metrizoate containing calcium and magnesium, toxicity of, 385
Spectrophotometry, estimation of sodium diatrizoate by absorption, 271
Spinal cord damage from contrast media in experimental aortography, 220
Splenoportography
  indirect, 227
  vasopressin as an adjunct to, 130
Stature, relation of metacarpal notching to, and maturational status of normal children, 96
Stenosis
  determination of orifice size in isolated pulmonary valvular, 367
  of internal carotid artery, relation of degree of, to blood flow and pressure gradient in man, 337
Swallowing, pharyngeal, in neuromuscular disorders, cinefluorographic analysis of, 219
Swallows, acid-barium, in the radiographic evaluation of clinical esophagitis, 67

T

Tannic acid diagnostic enemas, thiopental anesthesia and, 134
Tantalum, powdered, as a medium for bronchography in canine and human lungs, 229
Technetium ^{99m}Tc-labeled albumin, scintigraphic localization of placenta with, 226
Television image processing system, evaluation of, 44
Thiopental anesthesia and tannic acid diagnostic enemas, 134
Three-dimensional effect, full-color and, in radiographic displays, 56
Thymus, selective venography of, 226
Thyroid functions, parameter in following; per cent uptake per gram, 382
Toxicity
  of sodium metrizoate containing calcium and magnesium, 385
  studies with methylglucamine contrast agents, 324
Tubule, proximal renal, effect of abdominal aortography on function of, 130
Tumor area and blood flow; surface-limited nutrient supply, 216

U

Ultrasonic determination of size of cerebral ventricular system, 223
Ultrasound
  fetal anatomy displayed by, 442
  intracranial anatomy visualized in vivo by, 243
Urea washout pyelogram and urography in assessment of renovascular hypertension, evaluation of, 137
Ureter, observations on physiology of human renal pelvis and, 384
Urografin, experimental examination of post angiographic renal toxicity with, 137
Urography in assessment of renovascular hypertension, evaluation of urea washout pyelogram and, 137
Uromiro, experimental examination of post angiographic renal toxicity with, 137

V

Vagotomy on cholestanol cholelithogenesis in the rabbit, effect of, 239
Valves, reflux through normal aortic, 178
Vasa vasorum, plaque localization and distribution of, 70
Vasculature
  application of contrast media to external surface of; effects on microcirculation in bat wing, 151
  application of monomers and polymers to external surface of the; effects on microcirculation in bat wing, 408
  differential reactivity of neural and extraneural; role in the pathogenesis of spinal cord damage from contrast media in experimental aortography, 220
Vasopressin as an adjunct to splenoportography, 130
Vasospasm, cerebral, induced by subarachnoid blood and serotonin; angiographic study, 402
Veins, pulmonary, flow velocity variations in, of the dog, 73
Venography, selective thymic, 226
Ventricle, width of third; encephalographic and morbid anatomic study, 224
Vesicorenal reflex, 384
Visotrast, experimental examination of post angiographic renal toxicity with, 137

W

Weight, relationship of lung, to body length and weight, 61
